

CO1 - AT2 -
Concept Mapping.

Name: P. Deepika
Reg no: 192525026

Q6.

- Provides function like deposit(), withdraw() and balance().

- users interact only through these function.

↓
Implementation

(c function, arrays, structure, linked list)

→ uses c programming functions

→ stores data using array, structures and linked lists.

↓
Data Structure

Structure List

- stores account number, customer name, balance

Array

- Maintain transaction history

Linked

- stores customer rewards, dynamically

Social media Platform.

Social media Platform.

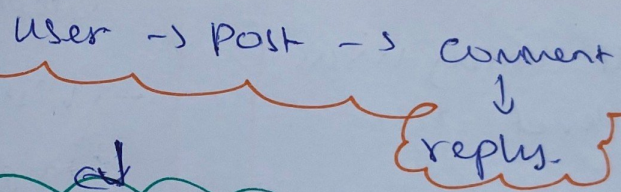

Tree

(Hierarchical organization of data).

- organize data in parent-child structure

- Example:

Hierarchical data

- stores information in different level
- makes data organized and easy to access.

Network data

Friends network

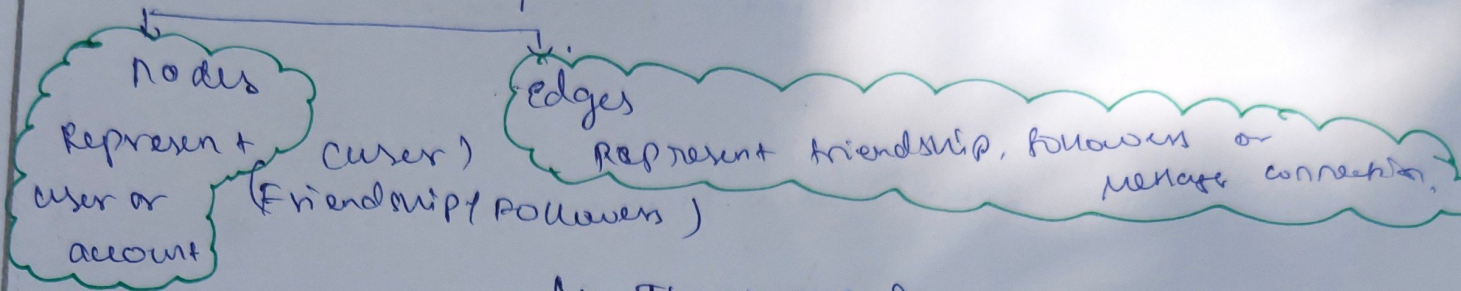

Recommendation System

Message network.

User profile

↳ contain user details, photos, post and personal information

Graph

Transversal Algorithm.

BFS

(Breadth First Search)

- visits all nearby users level by level
- used for finding mutual friends and shortest connection

DFS

(Depth First Search)

- visits one path completely before moving to another
- useful for exploring, connected community

Applications.

- Friend suggestion
- Search users
- mutual friends
- community detection
- social network analysis
